LevelView

## 概要描述

LevelView是高度创新的EBU R128和ATSC A/85标准的解决方案。

## 描述

---

LevelView是款高度创新的实时响度表。它的“彩虹表”采用BBC调研公司的“本迪表”概念，让用户可以连续知晓节目材料近期的响度电平。彩虹的每道环形都有不同的时长范围：外圈显示了过去3秒的响度，每向内移动格，时间范围增至三倍。这项技术已被证实，能够在混音过程中提供方便的监视。

彩虹表的外圈，是更快的“瞬时响度”表。它模拟了经典的光点表，亮度连续，比亮度快速变化的条形表更有助于保护眼睛。在彩虹旁，用数字显示了“整体响度”。你可以利用它，让节目达到目标响度。在数字下方，可以找到EBU响度的描述表格。在数表的左边，是个大型的直方图，完善了这款全面的插件。

LevelView is a highly innovative real time loudness meter. Its 'Rainbow meter', based upon the 'Bendy Meter' concept of BBC Research, gives the user continuous insight in recent loudness levels of the program material. The arcs of the rainbow all have different integration times: the outer ring shows loudness of the last 3s, every step inward triples the time span. This technique has proven to offer a very convenient monitor view during a mix process.

LevelView is the most innovative real time solution for EBU R128 and ATSC A/85 compliance.

Outside of the rainbow meter, a faster 'Momentary loudness' meter is shown. It is modeled on vintage light spot meters that offer a display with continuous brightness, which is less fatiguing for the eye than the rapidly changing light intensity of a bar graph meter. Next to the Rainbow the 'Integrated loudness' is shown in large digits. It can be used to aim for the target loudness of your program. Below this number, a table with all EBU loudness descriptors can be found. And on the left side of the meter a large histogram with Loudness Range indication completes this versatile plugin.

LevelView runs as a plugin in most DAW's on both Mac and PC. It follows the transport automatically and in selected DAW's the 'Link' mode even memorizes all levels of the time line so when you update a mix, the results are updated instantaneously. In the package there's also a standalone application that directly connects to your sound card. Last but not least, LevelView features a unique 'master' and 'slave' function, where slave units monitor the measurement data of a master unit via a LAN or even the internet!

LevelView offers you the finest view on loudness and will surely fascinate your customers. Seeing is believing, so download a free download for a 7 days evaluation period.
