概要描述

动态处理器插件

描述

MSpectralDynamics spectral mastering dynamics processor plugin is a true mastering revolution. It can do many things, but it's main feature serves as an ultramodern hi-tech replacement for multiband compressors and loudness maximizers. With top-class features such as custom shape processing it can provide you with a varied and wide range of effects. Additionally, it provides you with a free-form linear-phase equalizer with a range from -80dB to 0dB, which you can use to fix specific issues in your recordings and mixes.
