MixPack2

概要描述

6+high-resolution+%26+high+quality+plugins

描述

PSP MixPack2 is a collection of six high-resolution, high quality audio processors designed to improve the quality of your digital audio tracks and mixes (VST and RTAS for Windows; AudioUnit, VST, RTAS and AAX for MacOSX UniversalBinary). These processors were not modeled on specific hardware analog processors, but rather on the sound and features of many analog circuits, with the goal of designing processors that can assist you in taming the sterility and harshness that often plagues digitally recorded audio. Don't let the name of this bundle fool you - while we worked hard to develop a plug-in pack that would help your mixes shine, these plug-ins are high enough quality to be at home in mastering or live tracking situations as well. All plug-ins utilize 64-bit double precision floating point algorithms throughout their entire signal path and support sample rates of up to 192kHz.

The kit consists of: PSP MixBass2 , PSP MixTreble2 , PSP MixSaturator2 , PSP MixPressor2, PSP MixGate2 and PSP MixSync.
