产品图像

The screenshot displays the V-Metal software interface, which is used for electric guitar simulation. It is organized into several horizontal panels:

- V_METAL_fretboard_monitor:** This top panel shows a fretboard visualization with the instrument set to "5th-dyad" and the stroke set to "down". It includes a "Tune" knob set to 0.00, a "Purge" button, and MIDI settings (Output: st. 1, Midi Ch: [R] 1, Voices: 0, Max: 32, Memory: 0).
- single_note_str1:** This panel features a "legato slide" instrument selection, a "high vel. thrshld" set to 125, and a "gliss down" control set to "mid". It also includes "auto alternation" (time recog., 16th), "auto sustain", "poly mode", and "feedback" options.
- pinch_harmonics:** This panel is for setting up pinch harmonics. It includes a "high vel. thrshld" set to 125, "auto sustain", "poly mode", and "feedback" options. It features four "key switch range" settings (1-4) with "from" and "to" frequency selectors (e.g., C-1 to F#-1, G#-1 to E0). It also has "cur. position" and "string: fret:" indicators.

The interface is dark-themed with various knobs, buttons, and dropdown menus. The V-Metal logo is visible in the bottom right corner of the pinch harmonics panel.
